IMPORTANT NOTES FOR ALL CUSTOMERS

- 1. Back up.** You may request a copy of product by email in case you lose it. Use your order details for this (name product, order ID).
- 2. AUTO UPDATES.** Please sign up for auto updates, otherwise you will not get them automatically and would need to contact us yourself to check the actual version. To request auto updates, find your purchase confirmation letter with the download link and fill in the form at download page.
- 3. Account restriction.** Each copy is allowed to be used at 1 live account. Demo accounts are not limited. During its installation at live account, you will need a KEY-Code that is generated by our support team exclusively for your account. You need to send us your Order ID, name the product and include your MT4 account number to get the Key.

You may get EXTRA key: \$49 per each new account (non-refundable payments), discounts are available. Contact our support for more details.

Refund Policy.

Since it is a digital content make sure that you know what to expect. BFS Team shows verified performance of the product at 3rd party services like MyfxBook and FxBlue. As you make the purchase you agree that you take full responsibility for your trading results.

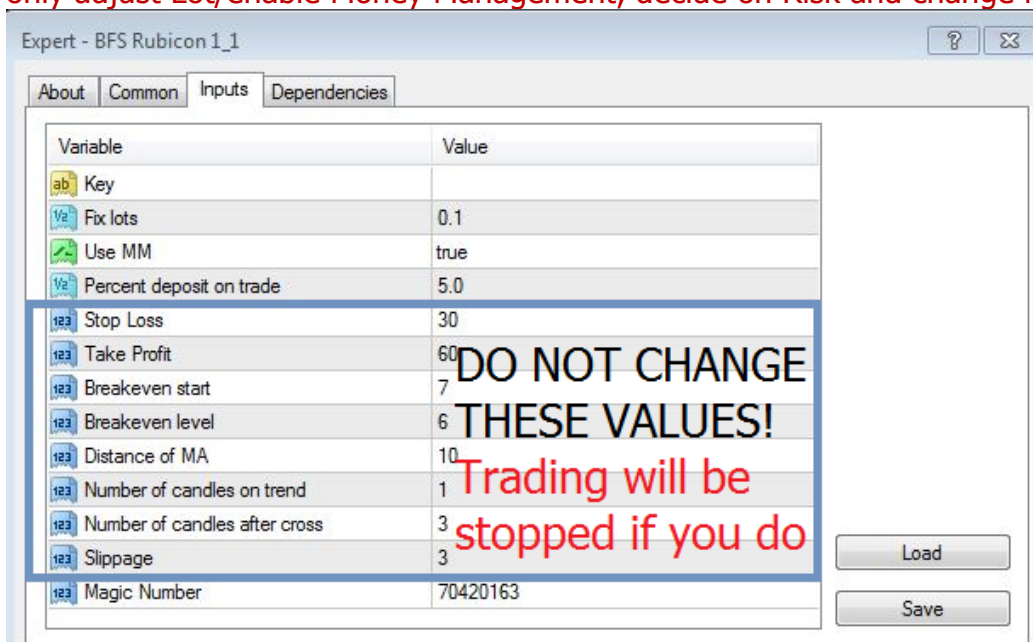

We will refund the payment if there is a strong reason like wrong/double payment, technical issues with the trading terminal, meaning that you can not proceed with your trading. So it is a technical side of the system that is covered with the refund period. Performance of the product can not be covered since it depends on the factors that we can not control like global economic events, etc.

PayPal Payment undertakes a money-back guarantee for the Customers, so called PayPal Buyer Protection Policy. But regard to the PayPal Buyer Protection Policy the BFS Team does not undertake this guarantee for this Product. According to the PayPal Buyer Protect Policy if the Team has accurately described an item, but the Customer is just not happy with it, that doesn't qualify this kind of protection. Furthermore according to the PayPal Buyer Protection Policy, claims can only be made for physical goods that can be posted and are not prohibited. The digital or electronic downloads, software licenses and other non-physical goods are not covered by this Paypal Buyer Protect Policy.

If you liked the product and if it paid back its price, please do not request the refund, we will appreciate your honesty! If you have a strong reason for refunding, please contact us. Provide your strong reason with screenshots, reports and it will be revised within 3 business days. Since we respect our customers, we will try to satisfy your request and refund the purchase.

RULES OF USING!

- ✓ **BFS Rubicon Robot** from BFS is a special **ex.4** file format that will be NOT opened by any Windows application, but should be used inside MetaTrader4 (MT4) only.
- ✓ **BFS Rubicon** Robot must be installed as Expert. For its proper trading Auto trading must be enabled with stable internet at all times. You may close it while weekends.
- ✓ **M15 timeframe is allowed.** Main pairs are **EURUSD, GBPUSD, AUDUSD, USDCHF** that come as presets with optimized settings. You need to load each preset at a pair – check that their magic numbers do not conflict with your robots.
- ✓ **Do not change variable settings that are loaded by presets: SL and TP, others highlighted at the screenshot!!!** If you change them, robot will stop trading. You may only adjust Lot/enable Money Management, decide on Risk and change Magic Number.

- ✓ **Risk chart. You select your Risk:** **Low (0-5%), Middle (5%-10%)** and **HIGH (above 10%).**
To select a best percentage of Risk, please check our table of average initial Lot. Then Robot automatically increases Lot while deposit grows. Value is approximate and may vary a bit depending on specific broker conditions.

Deposit (leverage)	Risk 1%	Risk 5%	Risk 10%
\$500 (1:200)	0,01 Lot	0,05 Lot	0,1 Lot
\$1 000 (1:200)	0,02 Lot	0,1 Lot	0.18 Lot
\$5 000 (1:200)	0,1 Lot	0,5 Lot	0,9 Lot
\$500 (1:500)	0,02 Lot	0,1 Lot	0,25 Lot
\$1 000 (1:500)	0,05 Lot	0,25 Lot	0,5 Lot
\$5 000 (1:500)	0,25 Lot	1 Lot	2,4 Lot

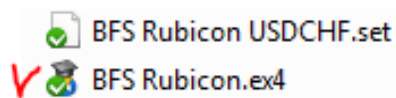

If you are not sure what risk to set, start with 2-3%. You may also use FIXED Lot Size and disable Money Management.

Getting started: Installation of Expert Advisor

It is not supported by mobile platforms yet, doesn't work with binary options and other latest MT4 "innovations". But it works perfectly with 4 and 5 digit brokers that support MT4 terminal for PC.

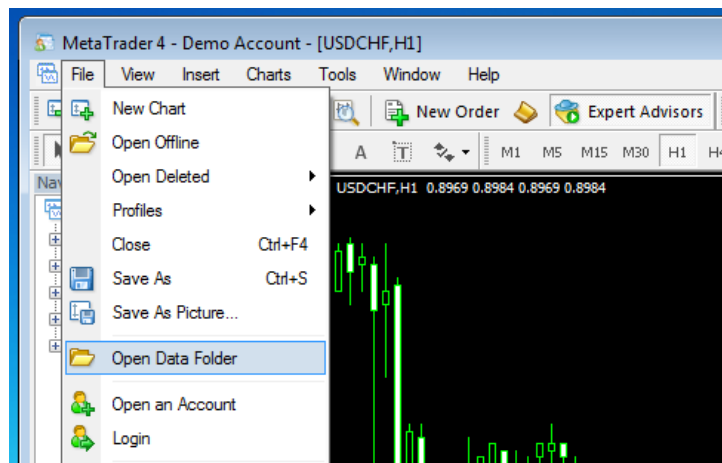

If you don't have a MetaTrader4 yet, select a broker. Download MT4 application from its website (it should be free!). Launch after a download is complete. Setup Wizard would guide you during the installation. When it is finished, you will find a shortcut (a new icon with the name of your broker) at your desktop. Double click it to start MT4. It will offer you to open a demo account. Fill in the form to activate your new demo account. Done.

Step 1. MT4 > File > Open Data Folder ... MQL4>Experts

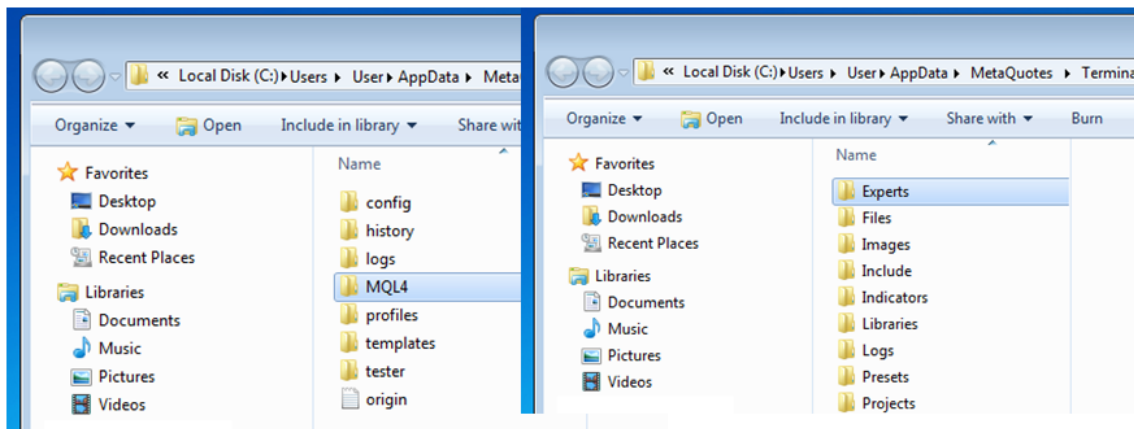

If you read this manual, you have managed to extract files from zipped archive. Now, find its ex.4 file (**BFS_Rubicon_1_1.ex4**). Right-click and select **Copy**.

- 1.1. Start MetaTrader4 if it is closed. Click a **File** button, select **Open Data Folder**.

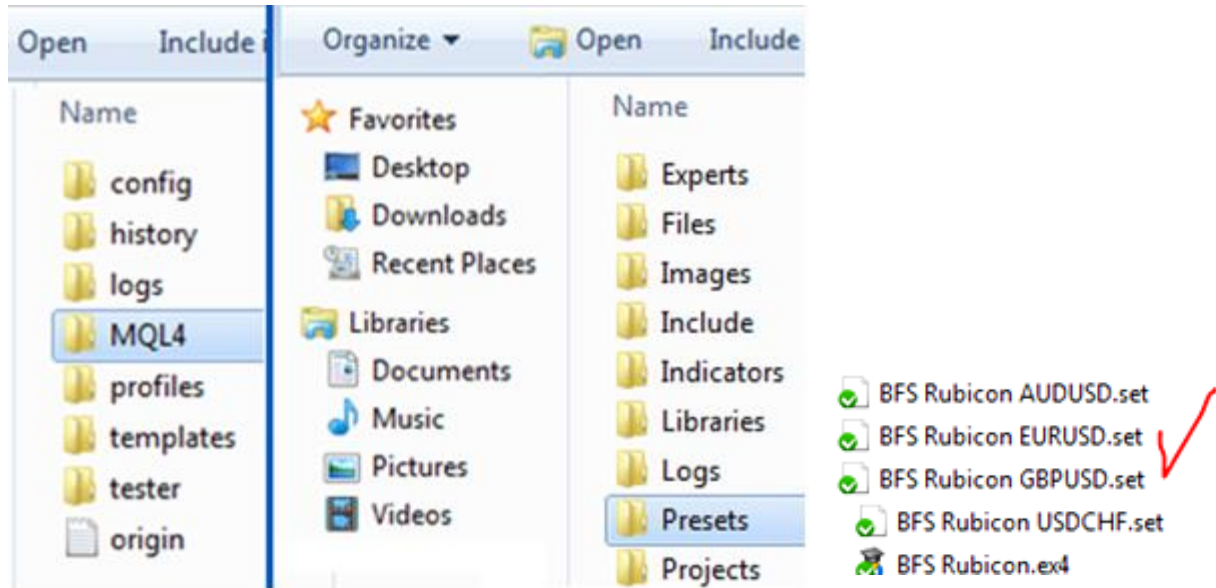

A folder of your broker will open in a new window. It may look like this:

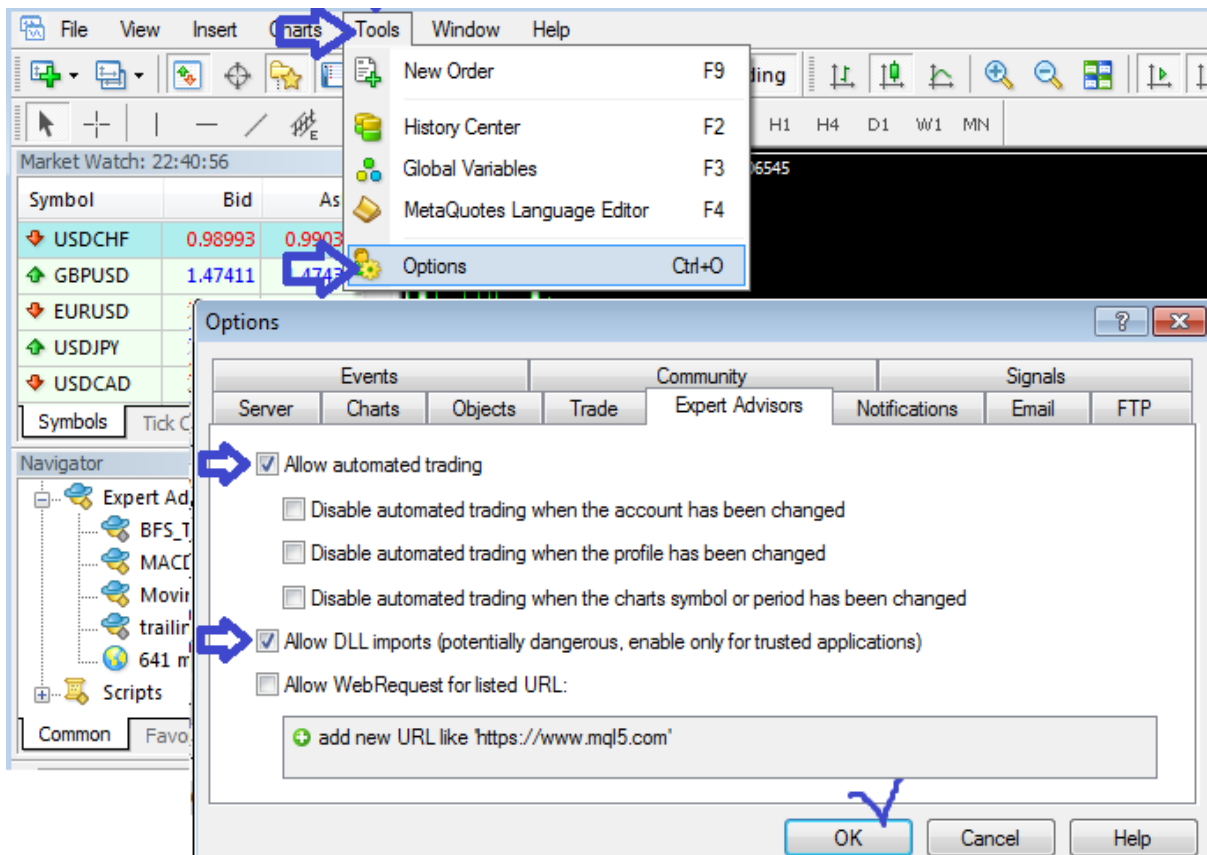

- 1.2. Open **MQL4** folder. Find **Experts** folder. Now Paste the selected ex.4 file inside **Experts** folder.

- 1.3. Get back to the unzipped files and copy .set files (all 4 pieces). Now again Go to File - **Open Data Folder – MQL4 – Presets**. Paste presets in **MQL4/Presets**

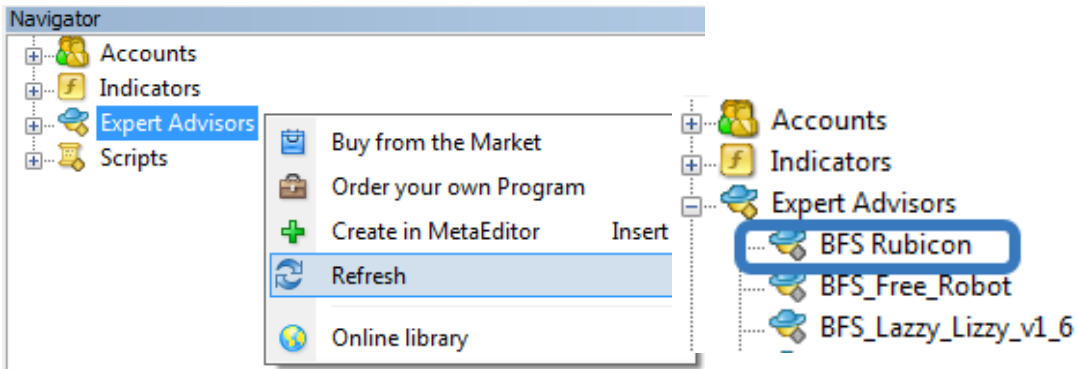

Step 2. MetaTrader4 settings

- 2.1. **Get back to MetaTrader4.** Check that your account is active and internet connection is on. Now check if your terminal allows Auto trading. Find **Tools**. Click **Options** and **Expert Advisors**. **Enable automated trading and Click OK to save it.**

2.2. Refresh Navigator list.

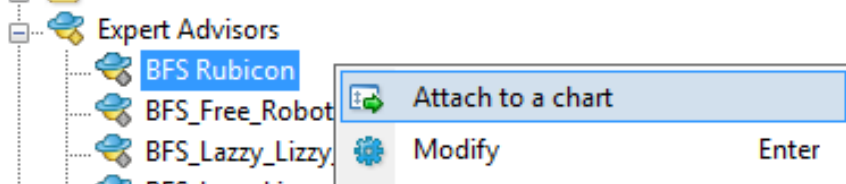

If you don't see Navigator list, press CTRL + N.

Only after you **REFRESH** the list or Restart Metatrader4 the files of the robot will be included in Navigator. Open (press "+") Expert Advisors list. You will find BFS Rubicon. If not, please repeat installation steps and refresh Navigator or Restart MT4.

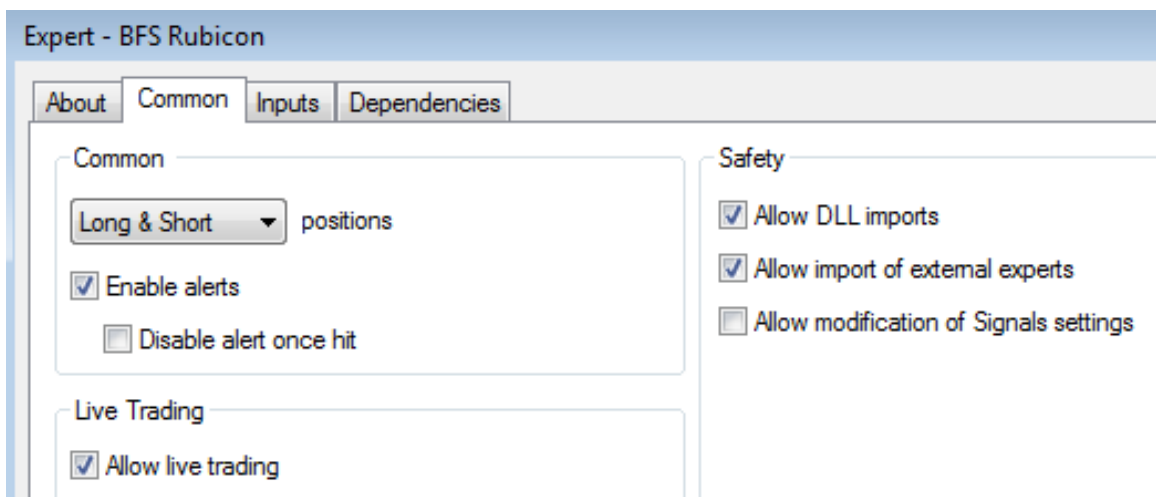

2.3. Open new EUR/USD chart. Switch to M15.

Right click on **BFS_Rubicon** in Navigator section. **Select Attach to a chart.**

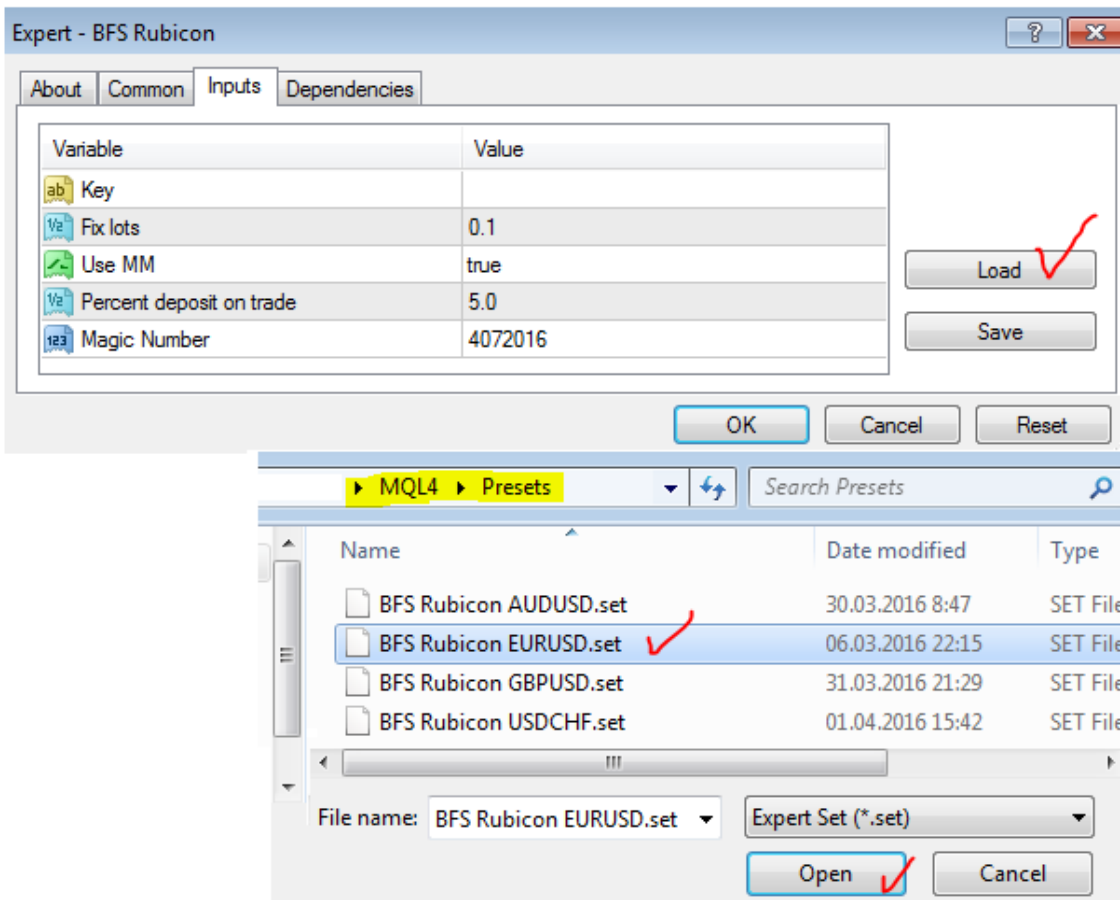

*You may also drag and drop the file to a chart.

A window with the settings appears. Please, set "**Common**" settings as below:

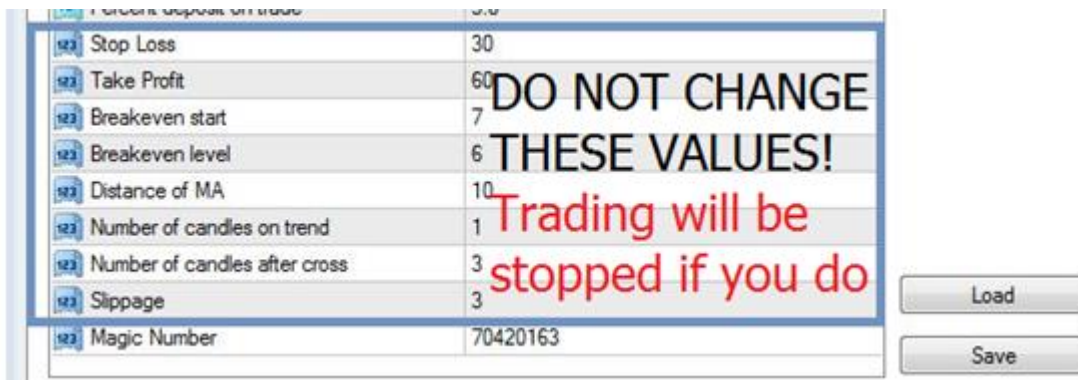

2.4. Switch to the Inputs. In the "**Inputs**" tab, you'll find the **adjustable** parameters. You need to LOAD preset for the each pair. Once you load it, you will see some of the inputs changed. Please note that you are not allowed to change them!

When you attached it to EURUSD, click Load:

So when you are attaching it to EURUSD, you click **Load** and select **EURUSD.set** file that contains optimized settings for it (including SL/TP and other details like magic number). If you can't find this file in the folder – please make sure you saved them before in this folder. Find the files and repeat the steps with copying – Copy them, Open Data Folder – MQL4 – Presets – Paste the files. Restart MT4 or Refresh the Navigator list. Now they should be there.

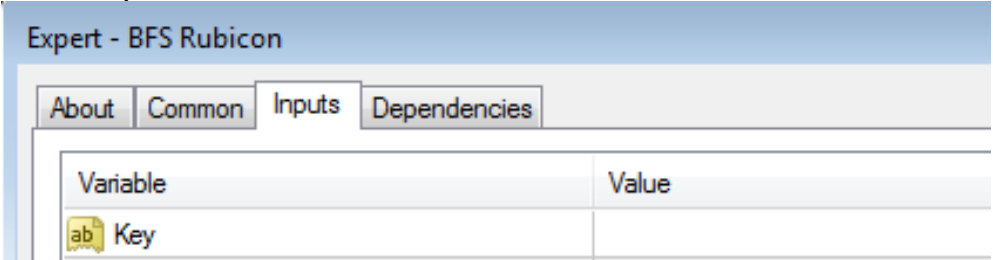

After you LOADED the preset (clicked Open button as in the example), settings would be enabled. **They are open in Inputs, but please do not change them! Otherwise robot may stop trading. Their modification will conflict with the algorithm.**

So please change only those Inputs that are described below.

Here you will need to select Lot Size or enable Money Management. Key for real account is also entered in Inputs when needed.

Inputs settings:

<p>Key</p>	<p>Applicable only to real accounts. Here you will enter Key-Code to activate your license. NOT FOR DEMO accounts.</p> 
<p>Lots</p>	<p>If you decide to trade with fixed lot size, select your Lot here. If Money Management will be set as TRUE, Lot Size will be calculated by robot based on selected Risk, Lot Size will be variable.</p> 
<p>Use MM</p>	<p>Money Management: TRUE – to activate it, FALSE to disable it and use Fixed Lot Size.</p> 
<p>Percent deposit on trade</p>	<p>Risk is calculated based on your deposit. You select your Risk: Low (0-5%), Middle (5%-10%) and Nerve-wrecking HIGH (above 10%). These ranges are given approximate, as they vary on your deposit and leverage. Please check our table of initial Lot based on selected Risk. It is a Lot Size that Robot will start trading with based on your deposit, leverage and Risk in %. Then Robot automatically increases Lot while deposit grows.</p>  <p>Selected Risk doesn't change drawdown, 5% of risk will be not equal to 5% of drawdown, so please be careful and do not select high %. We recommend 5% or less. Example of average lots:</p>

Deposit (leverage)	Risk 1%	Risk 5%	Risk 10%
\$500 (1:200)	0,01 Lot	0,05 Lot	0,1 Lot
\$1 000 (1:200)	0,02 Lot	0,1 Lot	0,2 Lot
\$5 000 (1:200)	0,1 Lot	0.5 Lot	1 Lot

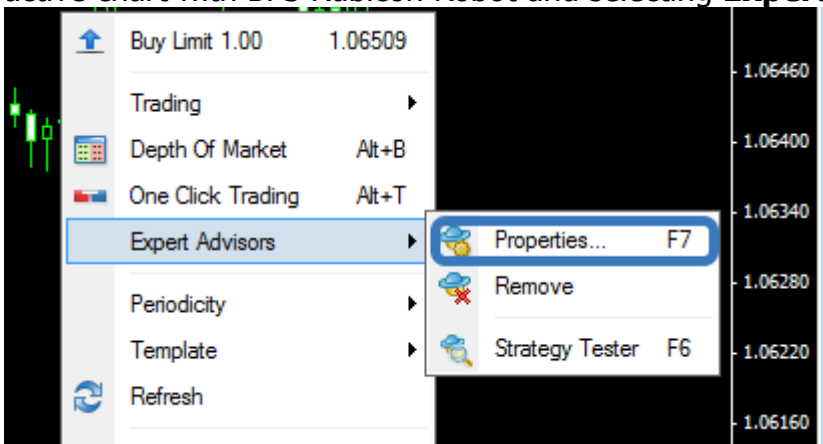

Deposit (leverage)	Risk 1%	Risk 5%	Risk 10%
\$500 (1:500)	0,02 Lot	0,1 Lot	0,25 Lot
\$1 000 (1:500)	0,05 Lot	0,25 Lot	0,5 Lot
\$5 000 (1:500)	0,25 Lot	1 Lot	2,4 Lot

Magic Unique number that MetaTrader4 uses for tracking its orders. When you Load preset per each pair – it will be changed accordingly. Check that their magic numbers do not conflict with your robots.

**StopLoss and TakeProfit are different per each pair. You need to load the preset of the pair to enable them, they are open in the settings, but please do not change them.*

Now, when you finished with Inputs settings, click **OK**.

You may get back to Inputs settings any time later by pressing F7, or by right clicking at active chart with BFS Rubicon Robot and selecting **Expert Advisors – Properties**

You will see the name in the right upper corner of your chart along with a smiley. If there is a cross instead of the smiley, check **Step 2.1**. Live Trading should be enabled. Also check that the Button of AutoTrading in Menu is green.

LIVE account setup. One account is allowed. Extra license is \$49.

Installation is the same as described above except Key registration. Here is the process:

- 1) Check the account number that is written in the left upper corner of MetaTrader4.
- 2) Find your purchase confirmation email with Order ID.
- 3) Send us email with the subject "Code request for BFS Rubicon Robot". Include MT4 account number, Order ID. Do not request it for demo accounts, unless it asks for it.

Our key is for 1 live account. Extra copies may be purchased from us.

Within few business days (but usually within the same day) you will get a personal Key-code via email. You will need to enter this code in Key section in Inputs. Click OK.

Variable	Value
Key	

In rare cases you may need to restart MT4 after this. If it is registered, you will see a green sign – Activated. Now provide it a stable internet and let it trade.

Update installation

You may need to update your version. To make sure that you reinstall it correctly please follow these steps:

- ✓ If you have any opened orders left – close them!
- ✓ Close charts with installed robot
- ✓ Go to **File – Open Data Folder > MQL4 – Experts** and DELETE the old version. DO not override files. Delete it. Delete PRESETS as well in MQL4/Presets.
- ✓ Restart MT4 or Refresh Navigator and check that it is not listed in Navigator any more.
- ✓ Now get back to **File – Open Data Folder > MQL4 – Experts** and paste here in Experts a new version. Paste new Presets in MQL4/Presets.
- ✓ Restart MT4 or Refresh Navigator. Attach a robot to new charts and load their new presets.

Troubleshooting

Please make sure you read RULES of using before searching here for the answer.

1. Robot doesn't trade

- i. Check that your MetaTrader4 has internet connection, your account has not expired and trading terminal is switched ON during its trading period.
- ii. Check global MT4 settings – Tools>Options>Expert Advisors – Allow Automated trading. Also check it in Common settings of the robot at your chart.
- iii. Check that you have enough money for trading, reduce Risk to 1%.
- iv. Check that you LOADED its preset. Check that you HAVE NOT changed preset settings.
- v. Check if there is any message at your chart about key or update. Update it or register if needed. Restart MetaTrader4 few more times. **REINSTALL IT.**

Sometimes it doesn't place orders for few days. So, if you inspected everything, just wait for 2-3 more days. In addition, it may be useful to check Experts and Journal tabs. Scroll down logs to see if there are any errors. It may help to detect a problem. While waiting for its trades, install the robot to any other demo terminal – of another broker. It may help you to detect a reason.

2. Robot loses money

- i. Check that you have stable internet. It is required for a stable performance of stealth profit and breakeven. Try leaving the terminal on for few days without restarting. Hibernation of PC with activated MetaTrader4 may be also a reason of faulty performance due to system time errors.
- ii. We hope that you followed our recommendations about Risk. High Lot Size is too risky for any account.
- iii. Check that you LOADED proper preset. Reinstall it and reduce Risk.
- iv. Bad luck. And we can't do anything about it.

Please understand that any robot is good for a limited specific time. We worked hard to make this robot long lasting and our trading with it has been stable so far. It works well with actual market but situation may change at any time due to economic or politic reasons that are beyond our control. So please trade safely – use low Lot Size and stop when it makes enough profit. Do not trade with money you can't afford to lose. Set yourself a profit target and when you reach it, just stop. Greed leads to Margin call and broken families. Take care of yourself! And we promise that we will be here to support you.

In case you have ANY questions, feel free to ask us directly and send an email to support@bestforexsoft.com. Our IT-guys and friendly Support Team would be happy to help you at any time. You may highlight a priority of your request by specifying the main topic of it such as "General question", "Help Request", etc.

Though, please note that trading is your personal choice and we do not give any recommendations on exact time and manner of trading.

About Us

"Best Forex Soft" (BFS) is the international software developing company.

"We are totally against any hidden tricks or fabricated results. We do not earn billions and don't make super robots for universal trading. WE DEVELOP RELIABLE SOFTWARE AND SHARE ONLY THE BEST OF IT."
