

FXzipper

USER MANUAL

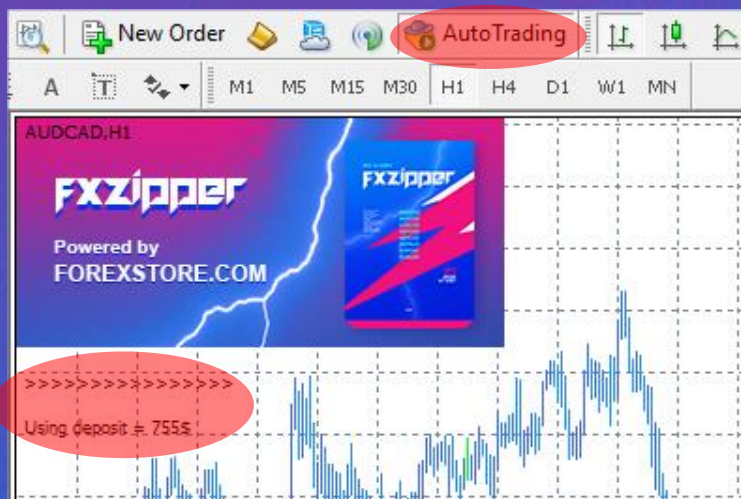

HOW TO INSTALL THE EA:

Open your MT4/MT5 terminal. Go to File → Open Data Folder → MQL4/MQL5 → Experts. Copy here FXZipper.ex4 file (if you use MT4), or FXZipper.ex5 file (if your use MT5) from the archive you received. Then go to File → Open Data Folder → MQL4/MQL5 → Libraries. Copy here ForexStore_1.4.dll file (if you use MT4), or ForexStore_MT5_1.4.dll file (if you use MT5) from the archive. Reboot your MT4/MT5 terminal.

Open any chart with any time frame, for example AUDUSD M1 chart. Drag and drop FXZipper from the Navigator panel to the open charts. Choose Common tab and check the boxes “Allow live trading” with “Allow DLL imports” (if you use MT4) and “Allow modification of Signal settings” with “Allow Algo Trading” (if you use MT5) as it is shown on the screenshot:

Choose Inputs tab, specify your desired risk, if needed (more information about all the parameters you can find below), or keep the recommended default settings. We recommend to set the risk of 5-10% (RiskLimit=5) for the most reliable trading, 15-20% risk (RiskLimit=15) for normal trading, and 25-35% risk (RiskLimit=25) for aggressive trading. Minimum deposit needed for trading is \$80 for 0.01 lot. In order to get as good trading results as you see on our account, we recommend that you definitely use accounts with a minimum spread, such as ECN, etc. Recommended spread is up to 0.5-2 (4-digit brokers) and up to 5-20 (5-digit brokers) depending on a currency pair. The lower the spread the better for profitability. Make sure that AutoTrading is enabled and the symbol “>” is running:

NOW YOU ARE READY TO START!

HERE YOU CAN READ MORE ABOUT ALL THE PARAMETERS OF FXZIPPER:

AutoRisk – the money management of FXZipper. If “true” the EA will set lot size automatically, based on your deposit and the risk you set. If “false” the EA will use lot size, which you can set manually in StartLot.

RiskLimit – a part of your deposit (in percentage) which the EA will use for trading. Doesn't work if AutoRisk is “false”. To be able to trade with the 5% risk (most reliable trading), your deposit should be \$400 (or higher). For trading with the 15% risk (normal trading) - \$135. For trading with the 25% risk (aggressive trading) - \$80.

StartLot – lot size, which you can set manually. Doesn't work if “AutoRisk” is “true”.

Mode – “Precision” – the EA opens the same trades and at the same time as on our verified account. “Efficiency” – trades will be opened either when the price is best for their opening (in order to earn maximum profit), or the EA will miss certainly low-profit trades.

SpreadLimitation – If “true” the EA will not open trades on pairs, the spread on which is higher than the recommended. If “false” the EA will open all trades no matter the spread.

AUDCAD/AUDUSD/etc. – enabling/disabling of trading on a corresponding currency pair.

Slippage – slippage, which you can set manually.

NFA – if “Yes”, the EA will disable opening of possible opposite trades (no hedge) and apply FIFO rule. If “No”, the EA will trade without NFA limitations. **Hide Stops** will hide SL and TP for all orders, if that is needed, and the EA will close trades in the necessary moments at their Market prices, same as on our account. Please notice, despite the fact of enabling NFA option, some brokers may show a FIFO error from time to time, but it is not dangerous for the logic of the EA.

MT5 version of the EA has an additional parameter - **Order_Filling_Type**:

ORDER_FILLING_FOK – an order can be filled only in the specified amount. That is a recommended default mode for a guaranteed proper work of the original strategy.

ORDER_FILLING_IOC – a trader agrees to execute a deal with the volume maximally available in the market. In case of using this mode, there could be a violation in the strategy of the EA, and we cannot guarantee a proper operation of the system in all kind of situations. Use this mode only if the default FOK mode is forbidden and you are ready to put up with possible deviations in the strategy.

ORDER_FILLING_RETURN – in case of partial filling an order with remaining volume is not canceled but processed further. In case of using this mode, there could be a violation in the strategy of the EA, and we cannot guarantee a proper operation of the system in all kind of situations. Use this mode only if the default FOK mode is forbidden and you are ready to put up with possible deviations in the strategy.
