Thank you for choosing Forex Robotron, the ultimate automated forex trading solution for the EURUSD & GBPUSD, 5 minute charts!

Recommended to use default settings, only change license and lots/risk.

This guide will help you get setup and running in just 5 minutes. If you have any questions please email support@forexrobotron.com
Account Activation

Before you start using Forex Robotron on your account(s) you need to email support@forexrobotron.com with your MetaTrader account number(s) along with your transaction id so that we can authorize and activate your account to use Forex Robotron. Once we have received your request we aim to activate your account number for you to use Forex Robotron on your MetaTrader account within 24 hours. You will receive an email with your license number once authorization is complete and you will then be able to use Forex Robotron on your account. Each mt4 account requires a unique license number.

Please contact us if you wish to change the mt4 account number or if you need additional license(s).

*VERY IMPORTANT INFORMATION*

Please read the following carefully. This is very important if you are to have success with Forex Robotron. The following information is worth the price tag alone.

Every single trading system will have periods of drawdowns or stagnation. This can be days or weeks even months when the trading results are at break even or a small loss. THIS IS COMPLETELY NORMAL! There is no trading system that does not go through such periods and you MUST NOT give up when this happens or else you WILL NEVER make profit from trading. You will move from system to system going round in circles and wasting your time.

Forex Robotron is a LONG TERM fully automated trading solution that must be given time to produce its fantastic results. DO NOT give up if you have a few losses. Look at the following screenshot for examples of how the robot can go through periods of stagnation and drawdown yet still make HUGE gains in the long run. Those who understand this reap all of the rewards!
LONG TERM TRADING RESULTS & PSYCHOLOGY!

A losing month followed by MANY consecutive winning months!

Are you a serious long term trader?

Would you have given up after 1 month and missed all the good results that followed?

REMEMBER: Losing days, weeks & months ARE completely normal and a part of trading.

To be successful, you must accept them, be patient and disciplined and you will get LONG TERM rewards.

</table>

Wow, 3 consecutive losing months!

This is VERY rare but again, look at the results before and after this 3 month period!

Even with 3 months of draw down, look how well overall and in the long term the robot performed!

If you would have given up during these 3 months you would have made a huge mistake!

You would have missed all of the profits that followed!

DO NOT panic after losing days, weeks or even months.

This is a long term automated trading solution. JUST LOOK AT THE OVERALL RESULTS!

---

You will see months where there was a small loss, now if you would have started trading with Robotron on that month then you probably would have given up and asked for a refund! That would have been a HUGE mistake, just look what happened after if you would have kept trading with it! It made back the losses and A LOT more profit on top. Those successful traders who are making lots of money are those who understand this. They know that there will be such times and they take it as part of trading knowing that in the long run the results will still be fantastic.

Again, days, weeks and even months with no profit can happen BUT if you look at the overall longer term picture, the gains are EXCELLENT. Just ensure that you are patient and you will reap the rewards. Otherwise, you will never find a trading solution that works for you as ALL will have such period. I cannot emphasise this enough, trading requires patience and discipline, so have confidence in Robotron and use it for LONG TERM realistic trading results. Do not panic after a few losing trades.

In extremely extensive testing I have seen Robotron go through week’s even months of stagnation but just look how much money it made in total! Just
because you did not make 100% in the first 2-3 weeks, it does not mean you will not make good gains in the following weeks.

A very important factor to also consider is Forex Robotron uses a tight stop loss and is very low risk so even in periods of stagnation and draw down, your account is still safe and ready for the profitable periods that follow.

So, you could have a 0% week (break-even), followed by a -5% week and perhaps then you would be writing off the robot and emailing for a refund right? WRONG, if you leave it the next week could easily be a +15% week and the 4\textsuperscript{th} week +20%. That is a total 30% gain in just 1 month! Now, if you had given up on week 2 you wouldn’t know this and would have missed out. You would have gone onto the next robot you like the look of and done the same thing over and over again – then wonder why you do not get anywhere in trading.

BE PATIENT & GIVE IT TIME – THIS IS A LONG TERM INVESTMENT THAT CAN MAKE YOU PROFIT CONSISTENTLY.

I have emails from happy users every single day thanking me for Forex Robotron and telling me the impressive gains it has made for them on their real accounts. I can tell you this for sure, the ones who are most happy are the ones who trust the robot to do its thing and give it plenty of time. They see the bigger picture and long term results rather than over reacting. The whole purpose of having a fully automated trading solution is to reduce stress from yourself, so do not worry; let Robotron do its thing.

I hope that has been made clear to you and that you “get it“. Many traders already know and understand this but I wanted to include that information in this manual for those who jump from system to system and expect to make a million in one week – be realistic and you will reach your financial goals with Robotron when you give it time.

If for any reason you want to discuss or verify your results with me please feel free to send me an email and we can discuss in detail. I can check your setup is correct with team viewer or by reviewing screen shots or trading statements.
*TRADING HOURS*

Forex Robotron trades 21-22 GMT when USA DST is on (i.e. summer) and 22-23 when USA DST is off (i.e. winter). DST is automatically adjusted for you. You do not need to adjust the hours during summer or winter.

These are by far the best trading hours for Forex Robotron that produce enough trades with very high accuracy. You do not need to over trade to make long term trading profits.

You only need to have your mt4 terminal running at these hours or outside these hours if there are open trades for Forex Robotron to manage. If you want to back test Robotron in the strategy tester then you will need to use GMT data with DST auto offset or adjust the trading hours for your brokers historical data (ONLY for back testing).
ECN Broker & Trading Accounts

A forex broker allows you to open trading accounts and trade forex through the internet using a trading platform such as MetaTrader 4. You can trade on a demo account to begin with and move over to a live account when you are ready. There are many forex brokers to choose from and before you begin trading, be sure your broker meets certain criteria. They should provide low spreads, low commissions, fast execution and no limitations on stops. A broker with an ECN/STP environment is your best choice as they will give you fast execution, little slippage, tight stops and tight spreads. One of the best brokers that we can recommend to open an account with is IC Markets. They have absolutely no restrictions and provide amongst the best possible conditions for forex expert advisors.

![IC Markets](image-url)
If you are already familiar with Meta Trader and have it installed on your computer, you can skip this section. If not, then please thoroughly read this section for instructions on how to install the Meta Trader trading platform and how to activate the robot.

Click here to download the free Meta Trader trading platform which we will use to run the robot. You will need to open a demo or live account to gain access to the Meta Trader 4 download.

After you have downloaded Meta Trader 4, followed the setup instructions and the installation is complete, launch Meta Trader 4.

When you launch Meta Trader you can login to your demo or real account. Click file – login and then enter your Meta Trader 4 account details.
Forex Robotron mt4 Setup

In order to attach Forex Robotron to your EURUSD & GBPUSD charts within MetaTrader 4, you will need to place the required files into the correct folder of the MetaTrader 4 installation directory. This section will describe where you should place the files ready for use. Please ensure you restart MetaTrader 4 after moving the files so that they will appear in the navigator window of the client terminal.

- First locate the Forex Robotron (ex4) file on your computer. Once located, move the Forex Robotron (ex4) file into the “experts” folder of the MetaTrader 4 directory. To find this directory, go to the mt4 terminal and click file from the top left hand corner and then click “open data folder”. From the data folder that has opened you must navigate to “MQL4”. Move the Forex Robotron (ex4) file into the “experts” folder. Restart the mt4 terminal. You should now see Forex Robotron in the “expert advisors” drop down menu of the navigator window within mt4. If you cannot see the navigator window load it from the main menu in MetaTrader by selecting the “view” drop down menu.

- You now need to open the EURUSD chart to run Forex Robotron on. Choose the EURUSD symbol and right click it then select “chart window” to open a chart for that currency pair. Change the timeframe of the
chart to m5 (5 minute chart) by right clicking the chart and selecting periodicity.

- You are now ready to attach Forex Robotron to the chart. Drag and drop Forex Robotron from the navigator window onto the chart. You will be displayed with a window. This window is where you set common expert advisor properties and the unique input settings of Forex Robotron. In the common tab you need to enable Forex Robotron. To do so, tick the boxes: “enable alerts”, “allow live trading”, “allow DLL imports” and “allow import of external experts”.

- Now click the “inputs” tab and choose your lot or risk size and enter your license number.
• If you have set the common setting of expert advisors correctly then a smiley face will appear in the right hand corner which means that Forex Robotron is active on that chart. Double check the chart is on the 5 minute timeframe and that there are no errors in the experts tab of the terminal window. If you have clicked “ok” and have a sad face displayed in the top right hand corner of the chart, this means that expert advisors are not enabled (Forex Robotron will not trade). To enable expert advisors, click the “expert advisors” button which is normally located near to the top of the trading platform. You may also need to navigate to “tools” from the mt4 top menu and select “options” then in the expert advisors tab ensure you have only checked the tick box for “allow automated trading” and “allow dll imports”. Forex Robotron is now analysing the market and will place/manage trades fully automated – just make sure that you leave the MetaTrader platform running on your computer or VPS.

• Repeat this process for both the EURUSD & GBPUSD currency pairs.

**Forex Robotron JForex Setup**

If you have a JForex account with Dukascopy or another broker then please follow these simple setup instructions. Any questions, please just ask.

• From the navigator window click strategies and open strategy.
• Select Forex Robotron jfx file
• Right click the Forex Robotron strategy and choose local or remote run
• Use the default settings (19 is the start hour not 20 as per mt4 because the hours coding is slightly modified – it will still start trading from 20 GMT)
Forex Robotron Input Parameters

So far you have installed the MetaTrader 4 trading platform, logged into your trading account and placed the Forex Robotron files into the correct folders. You have loaded up the EURUSD & GBPUSD charts to run Forex Robotron on and selected the m5 timeframe. Experts have been enabled and you have set the risk or lot size and license number in the Forex Robotron input settings.

In this section we will look at the different input parameters of Forex Robotron in detail so you can gain on understanding of what each does and change them should you require. This is also useful information for those who wish to optimize Forex Robotron by testing different combinations of the input parameters.

- **Robot Name** – Name used for Forex Robotron in trading terminal. This is the name displayed in the comments of the “trade” and “account history”.
- **License Number** – You need to enter your unique license number for your MetaTrader 4 account. If you have not received your license number yet or want to change to a different account, please email support@forexrobotron.com with your mt4 account number.
- **Max Spread** – Maximum spread. Forex Robotron will not trade if the current broker spread for the currency pair is greater than this value (the spread can be equal to this value).
- **Max Slippage** – Maximum slippage. Slippage is the difference between the quoted price and the actual price the trade is entered. Forex Robotron will not trade if the price has moved greater than this value (slippage can be equal to this value).
- **Hour Start** – Hour Forex Robotron begins trading. Trading hours are based on GMT with US DST which is calculated automatically in the code.
- **Hour End** – Hour Forex Robotron stops trading. Trading hours are based on GMT with US DST which is calculated automatically in the code.

NOTE: There can be trades that are still open after these hours so keep
your MetaTrader 4 terminal running at all times on your computer or VPS so the EA will manage these trades for you.

- **Lots** – If you set risk to false then you must set fixed lot size here instead. Make sure that you use a sensible lot size for your account balance.
- **Risk %** – % of free margin to risk per trade. The risk % is calculated by dividing the free margin by 100 and then multiplying this figure by the risk. This gives us the amount in $ value that we will risk for the trade so we divide that by the stop loss which gives us the value per lot. The actual full risk is not always lost as you will find out more about from the stop loss explanation below.
- **Trading Style** – Aggressive, Normal or Conservative – choose depending on your trading style. Normal is the default.
- **Minutes Sleep** – How many minutes the EA will sleep after a losing trade. This is to avoid consecutive losing trades. Set to 0 to disable.
- **Stop Loss** – Stop Loss distance from entry. Forex Robotron uses a fixed “safety” stop loss which is not always hit as the indicators used will usually close the trade for a win or loss before hand. This has the advantage that you do not actually lose the full risk per trade, so you will actually lose less than expected some of the time.
- **Take Profit** – Take Profit target. Forex Robotron will usually close out a trade using the built in indicators as this allows for a more flexible and less rigid approach to trading.
- **Min Profit** – The profit (in $) after commission must be greater than this value for the dynamic close in profit to work.
- **Dynamic Close Loss** – Set to true to use dynamic close when trade is in a loss. If set to false, fixed stop loss is used. If you don’t like the small losses from the dynamic stop loss, this set to false will keep a trade open until it closes in profit OR hits the full stop loss which may help cut out the frequent smaller losses. Obviously means a bigger loss when one full stop loss does happen (rarely) but can increase the win rate.
- **Dynamic Close Profit** – Set to true to use dynamic close when trade is in profit. If set to false, fixed take profit is used. You should leave this set to true because the dynamic close for profitable trades works best to exit at the best opportunity.
• **Trade Friday** – Set to true if you want to trade Friday. This is advised to be left false due to potential big weekend gaps that can cause big losses.

• **Trade Sunday** – Set to true if you want to trade Sunday. You may want to set to false if your broker has high spreads at the Sunday open.

**Set-Up Complete!**

You are now hopefully set up and running Forex Robotron on the EURUSD, & GBPUSD 5 minute charts! If you get stuck at any point or did not understand something then please contact support@forexrobotron.com – we are very friendly and here to help.

**Back Testing**

If you want to back test Forex Robotron, we only recommend testing with Dukascopy tick data, real spreads, real slippage and commissions. You can use Birt’s Tick Data Suite for tick testing in MetaTrader4 if required. You will need to do this if you want to verify for yourself the results on the Forex Robotron website. You will not be able to duplicate the results by using the data downloaded in MetaTrader 4 from Meta Quotes because this is not accurate tick data, does not use real spreads, does not include commissions, does not have any slippage features and is not GMT all year round with DST. GMT offset for the start and hours must be adjusted according to your broker data timezone when back testing.
Contact

If you need support please email: support@forexrobotron.com. We will aim to reply to you within 24 hours (excluding weekends).

Refunds

We strongly believe that Forex Robotron is a great automated forex trading solution for consistent, safe and long term gains. You have a full 30 days to use Forex Robotron on your trading account. If you are not happy with the performance of Forex Robotron then please email support@forexrobotron.com with your transaction ID and your reason for wanting a refund. Once you have been refunded, your MetaTrader account number will be deleted from our authenticating server and Forex Robotron will no longer work on your trading account. Remember that trading requires patience and discipline – do not give up after a period of draw down and stagnation as this happens with ANY trading system. It is the long term results that matter. Please do not open any disputes as this does not help refunds get processed any faster, it slows things down.
