Thank you for choosing Forex Cyborg, the most innovative multi-currency forex trading robot on the market! Trade 14 currency pairs at once, 15 minute charts!

Use default settings, only change the license key and lots/risk. Forex Cyborg trades from 18:30-23:30 GMT depending on the chosen pair. The revolutionary new “currency correlation risk-manager” will help you to manage your risk. Two different preset-types are build-in in the EA. You can choose between the “Normal” and the “Conservative”-set. “Normal” will produce the most profit, while “Conservative” only try to catch the best trades (but it will trade less frequent).

This guide will help you get setup and running in just 5 minutes. If you have any questions please email support@forexcyborg.com
Account Activation

Before you start using Forex Cyborg on your account(s) you need to email support@forexcyborg.com with your MetaTrader account number(s) along with your transaction id so that we can authorize and activate your account to use Forex Cyborg.

Once we have received your request we aim to activate your account number on your MetaTrader account within 24 hours. You will receive an email with your license number once authorization is complete and you will then be able to use Forex Cyborg on your account. Each MetaTrader 4 account requires a unique license number.

Please contact us if you wish to change the MetaTrader 4 account number or if you need additional license(s).

*VERY IMPORTANT INFORMATION*

Please read the following carefully. This is very important if you are to have success with Forex Cyborg. The following information is worth the price tag alone.

Every single trading system will have periods of drawdowns or stagnation. This can be days or weeks even months when the trading results are at break even or a small loss. THIS IS COMPLETELY NORMAL! There is no trading system that does not go through such periods and you MUST NOT give up when this happens or else you WILL NEVER make profit from trading. You will move from system to system going round in circles and wasting your time.

Forex Cyborg is a LONG TERM fully automated trading solution that must be given time to produce its fantastic results. DO NOT give up if you have a few losses. Look at the following screenshot for examples of how the robot can go through periods of stagnation and drawdown yet still make HUGE gains in the long run. Those who understand this reap all of the rewards!
LONG TERM TRADING RESULTS & PSYCHOLOGY!

A losing month followed by MANY consecutive winning months!
Would you have given up after 1 month and missed all the good results that followed?
REMEMBER: Losing days, weeks & months ARE completely normal and a part of trading.
To be successful, you must accept them, be patient and disciplined and you will get LONG TERM rewards.

</table>

Wow, 3 consecutive losing months!
This is VERY rare but again, look at the results before and after this 3 month period!
Even with 3 months of draw down, look how well overall and in the long term the robot performed!
If you would have given up during these 3 months you would have made a huge mistake!
You would have missed all of the profits that followed!
DO NOT panic after losing days, weeks or even months.
This is a long term automated trading solution. JUST LOOK AT THE OVERALL RESULTS!

You will see months where there was a small loss, now if you would have started trading with Cyborg on that month then you probably would have given up and asked for a refund! That would have been a HUGE mistake, just look what happened after if you would have kept trading with it! It made back the losses and A LOT more profit on top. Those successful traders who are making lots of money are those who understand this. They know that there will be such times and they take it as part of trading knowing that in the long run the results will still be fantastic.

Again, days, weeks and even months with no profit can happen BUT if you look at the overall longer term picture, the gains are EXCELLENT. Just ensure that you are patient and you will reap the rewards. Otherwise, you will never find a trading solution that works for you as ALL will have such period. I cannot emphasise this enough, trading requires patience and discipline, so have confidence in Cyborg and use it for LONG TERM realistic trading results. Do not panic after a few losing trades.

In extremely extensive testing I have seen Cyborg go through week’s even months of stagnation but just look how much money it made in total! Just
because you did not make 100% in the first 2-3 weeks, it does not mean you will not make good gains in the following weeks.

A very important factor to also consider is Forex Cyborg uses very low risk so even in periods of stagnation and draw down, your account is still safe and ready for the profitable periods that follow.

So, you could have a 0% week (break-even), followed by a -5% week and perhaps then you would be writing off the robot and emailing for a refund right? WRONG, if you leave it the next week could easily be a +15% week and the 4\textsuperscript{th} week +20%. That is a total 30% gain in just 1 month! Now, if you had given up on week 2 you wouldn’t know this and would have missed out. You would have gone onto the next robot you like the look of and done the same thing over and over again – then wonder why you do not get anywhere in trading.

BE PATIENT & GIVE IT TIME – THIS IS A LONG TERM INVESTMENT THAT CAN MAKE YOU PROFIT CONSISTENTLY.

I have emails from happy users every single day thanking me for Forex Cyborg and telling me the impressive gains it has made for them on their real accounts. I can tell you this for sure, the ones who are most happy are the ones who trust the robot to do its thing and give it plenty of time. They see the bigger picture and long term results rather than over reacting. The whole purpose of having a fully automated trading solution is to reduce stress from yourself, so do not worry; let Cyborg do its thing.

I hope that has been made clear to you and that you “get it”. Many traders already know and understand this but I wanted to include that information in this manual for those who jump from system to system and expect to make a million in one week – be realistic and you will reach your financial goals with Cyborg when you give it time.

If for any reason you want to discuss or verify your results with me please feel free to send me an email and we can discuss in detail. I can check your setup is correct with team viewer or by reviewing screen shots or trading statements.
**TRADING HOURS**

Forex Cyborg trades from 18:30-23:30 GMT (depending on the chosen currency pair). These are by far the best trading hours for Forex Cyborg that produce enough trades with very high accuracy. You do not need to over trade to make long term trading profits. You also do not need to adjust the hours when you run Forex Cyborg as GMT is automatically calculated for you. You only need to have your mt4 terminal running at these hours or outside these hours if there are open trades for Forex Cyborg to manage. If you want to back test Cyborg in the strategy tester then you will need to use GMT data or adjust GMT Offset (+ possibly DST) in the parameters (ONLY for back testing).
ECN Broker & Trading Accounts

A forex broker allows you to open trading accounts and trade forex through the internet using a trading platform such as MetaTrader 4. You can trade on a demo account to begin with and move over to a live account when you are ready. There are many forex brokers to choose from and before you begin trading, be sure your broker meets certain criteria. They should provide low spreads, low commissions, fast execution and no limitations on stops. A broker with an ECN/STP environment is your best choice as they will give you fast execution, little slippage, tight stops and tight spreads. One of the best brokers that we can recommend to open an account with is Darwinex. They have absolutely no restrictions and provide amongst the best possible conditions for forex expert advisors. And they are regulated in the UK by the FCA, one of the best regulations for a forex broker.
If you are already familiar with Meta Trader and have it installed on your computer, you can skip this section. If not, then please thoroughly read this section for instructions on how to install the Meta Trader trading platform and how to activate the robot.

Click here to download the free Meta Trader trading platform which we will use to run the robot. Select “save as” when prompted to download.

Run the setup file, read and agree to the terms, then click next.

Meta Trader 4 (MT4) will be automatically installed onto your computer. After the installation is complete, launch Meta Trader 4.
To open a demo account, you need to log into your Darwinex-account (click here to open the website). Once you are logged in, you can find the menu “Trading accounts” on the left (1). Click on “Demo Darwinex MT4”. In the next step click on “OPEN DEMO MT4 ACCOUNT” (2).

Follow the instruction on the website to finish the creation.

After this, open your MetaTrader 4 and click file – Login to Trade Account. Fill out the Login and Password you just created. Click Login when ready.

If you already have a live account then you can login by choosing the Server Darwinex-Live.
Forex Cyborg mt4 Setup

In order to attach Forex Cyborg to your charts within MetaTrader 4, you will need to place the required files into the correct folder of the MetaTrader 4 installation directory. This section will describe where you should place the files ready for use. Please ensure you restart MetaTrader 4 after moving the files so that they will appear in the navigator window of the client terminal.

- First locate the Forex Cyborg (ex4) file on your computer. Once located, move the Forex Cyborg (ex4) file into the “experts” folder of the MetaTrader 4 directory. To find this directory, go to the mt4 terminal and click file from the top left hand corner and then click “open data folder”. From the data folder that has opened you must navigate to “MQL4”. Move the Forex Cyborg (ex4) file into the “experts” folder. Restart the mt4 terminal. You should now see Forex Cyborg in the “expert advisors” drop down menu of the navigator window within mt4. If you cannot see the navigator window load it from the main menu in MetaTrader by selecting the “view” drop down menu.

- You now need to open the EURUSD chart to run Forex Cyborg on. Choose the EURUSD symbol and right click it then select “chart window” to open a chart for that currency pair. Change the timeframe of the chart.
chart to m15 (15 minute chart) by right clicking the chart and selecting periodicity.

- You are now ready to attach Forex Cyborg to the chart. Drag and drop Forex Cyborg from the navigator window onto the chart. You will be displayed with a window. This window is where you set common expert advisor properties and the unique input settings of Forex Cyborg. In the common tab you need to enable Forex Cyborg. To do so, tick the boxes: “enable alerts”, “allow live trading”, “allow DLL imports” and “allow import of external experts”.

- Now click the “inputs” tab and choose your lot or risk size and enter your license number then click OK to activate Cyborg on the chart. You do not need to change any other input settings. GMT is calculated automatically.
If you have set the common setting of expert advisors correctly then a smiley face will appear in the right hand corner which means that Forex Cyborg is active on that chart. The information panel on the left will show you the current state of Forex Cyborg. Double check the chart is on the 15 minute timeframe and that there are no errors in the experts tab of the terminal window. If you have clicked “ok” and have a sad face displayed in the top right hand corner of the chart, this means that expert advisors are not enabled (Forex Cyborg will not trade). To enable expert advisors, click the “expert advisors” button which is normally located near to the top of the trading platform. You may also need to navigate to “tools” from the mt4 top menu and select “options” then in the expert advisors tab ensure you have only checked the tick box for “allow automated trading” and “allow dll imports”. Forex Cyborg is now analysing the market and will place/manage trades fully automated – just make sure that you leave the MetaTrader platform running on your computer or VPS.

Repeat this process for the following currency pairs:

**BASIC-version:** AUDCAD, EURCAD, EURGBP, EURAUD, EURUSD, GBPUSD, USDCDFH

**STANDARD / GOLD-version:** AUDCAD, EURCAD, EURGBP, EURAUD, EURUSD, GBPUSD, USDCDFH, AUDCHF, AUDUSD, CADCHF, EURCHF, GBPAUD, GBPCAD, USDCAD
Forex Cyborg Input Parameters

So far you have installed the MetaTrader 4 trading platform, logged into your trading account and placed the Forex Cyborg files into the correct folders. You have loaded up all 7-14 currency charts to run Forex Cyborg on and selected the m15 timeframe. Experts have been enabled and you have set the risk or lot size and license number in the Forex Cyborg input settings.

Forex Cyborg has built in GMT functions so you do NOT need to change the trading hours – this is done for you automatically. To use the “currency correlation risk-manager” you need to set the same Magic number on all charts. Forex Cyborg will automatically block new positions (on default max. 2 Positions per currency), if there are already enough positions for the same currency.

In this section we will look at the different input parameters of Forex Cyborg in detail so you can gain on understanding of what each does and change them should you require. This is also useful information for those who wish to optimize Forex Cyborg by testing different combinations of the input parameters.

- **Comment** – Name used for Forex Cyborg in trading terminal. This is the name displayed in the comments of the “trade” and “account history”.
- **License key** – You need to enter your unique license number for your MetaTrader 4 account. If you have not received your license number yet or want to change to a different account, please email support@forexcyborg.com with your mt4 account number.
- **Magic Number** – A number to identify all trades from Forex Cyborg. Use the same Magic Number on all charts. The “currency correlation risk-manager” use this Number to identify his trades and check the risk.
- **GMT Auto calculation** – Set this to true. Forex Cyborg will automatically detect GMT settings in this case.
- **GMT Offset** – Will be used if you set GMT Auto calculation to false or during backtests.
- **DST** – Daylight Saving-Setting. Will be used if you set GMT Auto calculation to false or during backtests. Set it according to your broker settings.

- **MM Type** – Money Management-Type. 
  
  You can choose between:
  
  - **Fixed lot** – You can set a fixed lot size into “MM size”. Make sure that you use a sensible lot size for your account balance
  
  - **Risk per Trade** - % of free margin to risk per trade. The risk % is calculated by dividing the free margin by 100 and then multiplying this figure by the risk. This gives us the amount in $ value that we will risk for the trade so we divide that by the stop loss which gives as the value per lot. The actual full risk is not always lost as you will find out more about from the stop loss explanation below.

  - **Percent of Balance** - % risk of your account balance. The risk is calculated based on the account balance.

- **MinimizeRiskCorrelation** – this activate the “currency correlation risk-manager”. To minimize the risk Forex Cyborg will search for other trades of the same currency and only allow to open a trade if the sum of open positions is less than “MaxCorrelatedTradesPerCurrency” (the next option). For example: MaxCorrelatedTradesPerCurrency=2 and we got the following open positions: CADCHF (Buy) and EURCAD (Sell). Now Forex Cyborg will block AUDCAD (Sell), GBPCAD (Sell) and USDCAD (Sell). As soon as one of the position got closed, they are all allowed again.

- **MaxCorrelatedTradesPerCurrency** – only be used if “MinimizeRiskCorrelation” is true. A higher number allow more trades of the same currency at the same time. But this will upper the overall risk too.

- **SymbolPrefix** – You only need to set this, when your symbols have a prefix. Example: If you EURUSD symbol is called iEURUSD, than you need to set here a “i”.

- **Preset Type** – “Normal” – The typically internal presets will be used. They are optimized for the highest profit. “Conservative” will trade less frequent, but more precise and will reach StopLess very rarely.

- **StopTradingOnFridayClosing** – Set it to true, if you don’t want that Forex Cyborg place new trades on Friday evening before the market close.
- **StopTradingOnMondayOpening** – Set it to true, if you don’t want that Forex Cyborg place new trades on the market opening at Sunday/Monday
Back Testing

If you want to back test Forex Cyborg, we only recommend testing with Dukascopy tick data, real spreads, real slippage and commissions. You can use Birt’s Tick Data Suite for tick testing in MetaTrader4 if required. You will need to do this if you want to verify for yourself the results on the Forex Cyborg website. You will not be able to duplicate the results by using the data downloaded in MetaTrader 4 from Meta Quotes because this is not accurate tick data, does not use real spreads, does not include commissions, does not have any slippage features and is not GMT all year round. GMT offset for the start and hours must be adjusted according to your broker data timezone when back testing.

Contact

If you need support please email: support@forexcyborg.com. We will aim to reply to you within 24 hours (excluding weekends).

Refunds

We strongly believe that Forex Cyborg is a great automated forex trading solution for consistent, safe and long term gains. You have a full 30 days to use Forex Cyborg on your trading account. If you are not happy with the performance of Forex Cyborg then please email support@forexcyborg.com with your transaction ID and your reason for wanting a refund. Once you have been refunded, your MetaTrader account number will be deleted from our authenticating server and Forex Cyborg will no longer work on your trading account. Remember that trading requires patience and discipline – do not give up after a period of draw down and stagnation as this happens with ANY trading system. It is the long term results that matter. Please do not open any disputes as this does not help refunds get processed any faster, it slows things down.
