

INSTALLATION PROCESS

- Unzip files from the zip archive to MetaTrader4 folders. You need to put FXOxygen.ex4 file to Experts folder, and ForexStore.dll file to Libraries folder. You can find these folders through your MetaTrader4 terminal File -> Open Data Folder -> MQL4.
- Reboot MetaTrader4.
- Find FXOxygen in the Navigator window and move it to EURUSD chart with any time frame. Please notice, you do not need to attach the EA on two charts. FXOxygen will trade on all the supported currency pairs, if you attach the EA to one chart only.
- Allow DLL imports and live trading in Common options and set Inputs parameters.
- Check if you did everything right.

REQUIREMENTS

FXOxygen works on EUR/USD and USD/JPY currency pairs only. Required deposits for each currency pair are:

EUR/USD

Minimal deposit	Deposit for a reliable trading with 35% risk
\$760	\$2180
Lot 0.01	Lot 0.01

USD/JPY

Minimal deposit	Deposit for a reliable trading with 35% risk
\$590	\$1690
Lot 0.01	Lot 0.01

RECOMMENDED SETTINGS

Default settings of FXOxygen are the recommended.

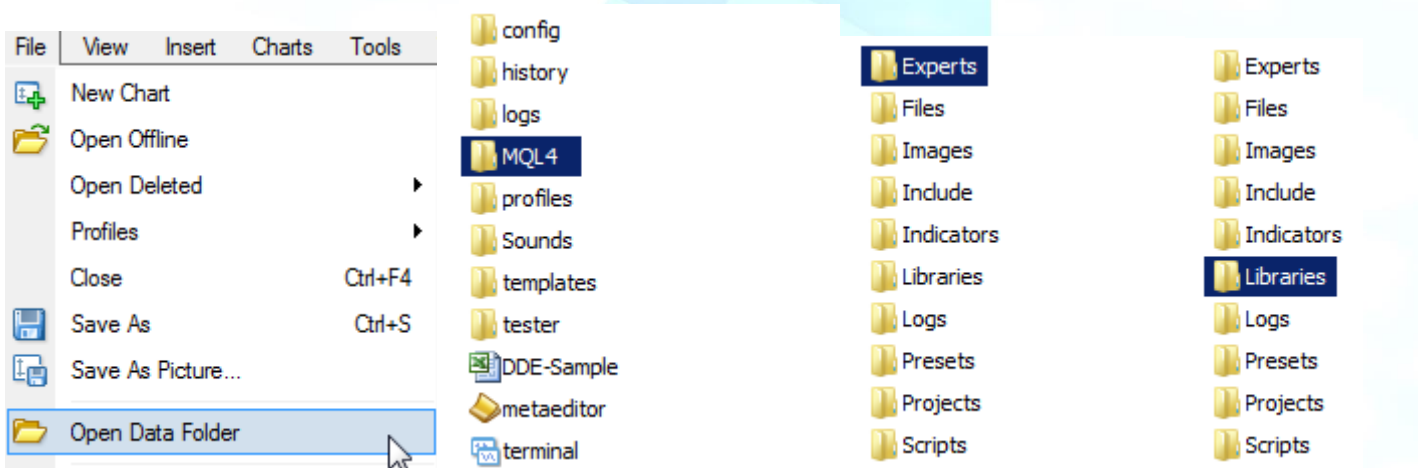

INPUTS OPTIONS

Auto_Lot	Percentage of your deposit, which FXOxygen will work with. The EA sets lot based on this parameter.
Lot	In case "Auto_Lot" is equal "0" you can set the desired lot manually there.
Slippage	You can set the desired slippage manually there. Change this parameter only in case of conscious necessity.
Trade on EURUSD/USDJPY	Enabling/disabling the trading on a corresponding currency pair.
NFA	NFA - if "Yes", the EA will disable opening of possible opposite trades (no hedge) and apply FIFO rule. If "No", the EA will trade without NFA limitations. Hide Stops will hide SL and TP for all orders, if that is needed, and the EA will close trades in the necessary moments at their Market prices, same as on our account. Please notice, despite the fact of enabling NFA option, some brokers may show a FIFO error from time to time, but it is not dangerous for the logic of the EA.

FAQ

- I installed FXOxygen on my PC/VPS, but I cannot find the EA in Navigator window.

Make sure that you opened the main MQL4 MetaTrader4 folder and copied FXOxygen.ex4 file to Experts folder and ForexStore.dll file to Libraries folder.

- MetaTrader4 shows an error "Cannot call 'ForexStore.dll', 'ForexStore.dll' is not loaded".

Check if you allowed DLL imports in Common options of the EA. If you did so, make sure that ForexStore.dll file is in the Libraries folder.

- I installed the EA properly, but it does not seem to trade.

Make sure that you allowed live trading and that the “AutoTrading” button of MetaTrader4 is enabled.

The EA should trade 24/5. It opens a first trade within the next 24 hours after starting. So maybe you just need to wait for a while.
